Scaffolding Solutions Safety Policy Statement

Scaffolding Solutions Safety Policy is a simple and fundamental commitment integrated into everything that we do. Safe operations are the foundation cornerstone for all functions throughout the enterprise with Safety, Quality, and Performance forming the base of Scaffolding Solutions' mission to be the leading supplier of safe worker access.

Scaffolding Solutions provides fully erected, turnkey elevated work platform access for all types of new and restoration construction projects, industrial operations, and shipyard staging applications, as well as other custom-engineered scaffolding and staging structures where safe worker access is required.

Our basic business philosophy is to operate a company that delivers excellence in all that we do, especially safety. We employ well-trained professionals and are committed to their safety as well as that of the workers who use the scaffold structures we build. Scaffolding Solutions utilizes the innovative Turner OCTO system scaffolding, the most advanced scaffolding product available, offering many unique safety and productivity advantages unmatched in the scaffolding industry. We strive to comply fully with federal and state safety and health laws and regulations, including all those that apply to our customers' facilities in the various industries in which we operate. In addition, management decisions and work procedures are guided by seeking and following "Best Practices"; ensuring the Company's mission for excellence is operationally executed and achieved.

Lastly, it is every employee's duty to follow this safety policy doctrine as a basis of continued employment and personal commitment to their co-workers and the customers whom we serve.
